**Crustacea, Malacostraca, Decapoda, Natantia,  
Penaeidea, Sergestidae**

**Features:**

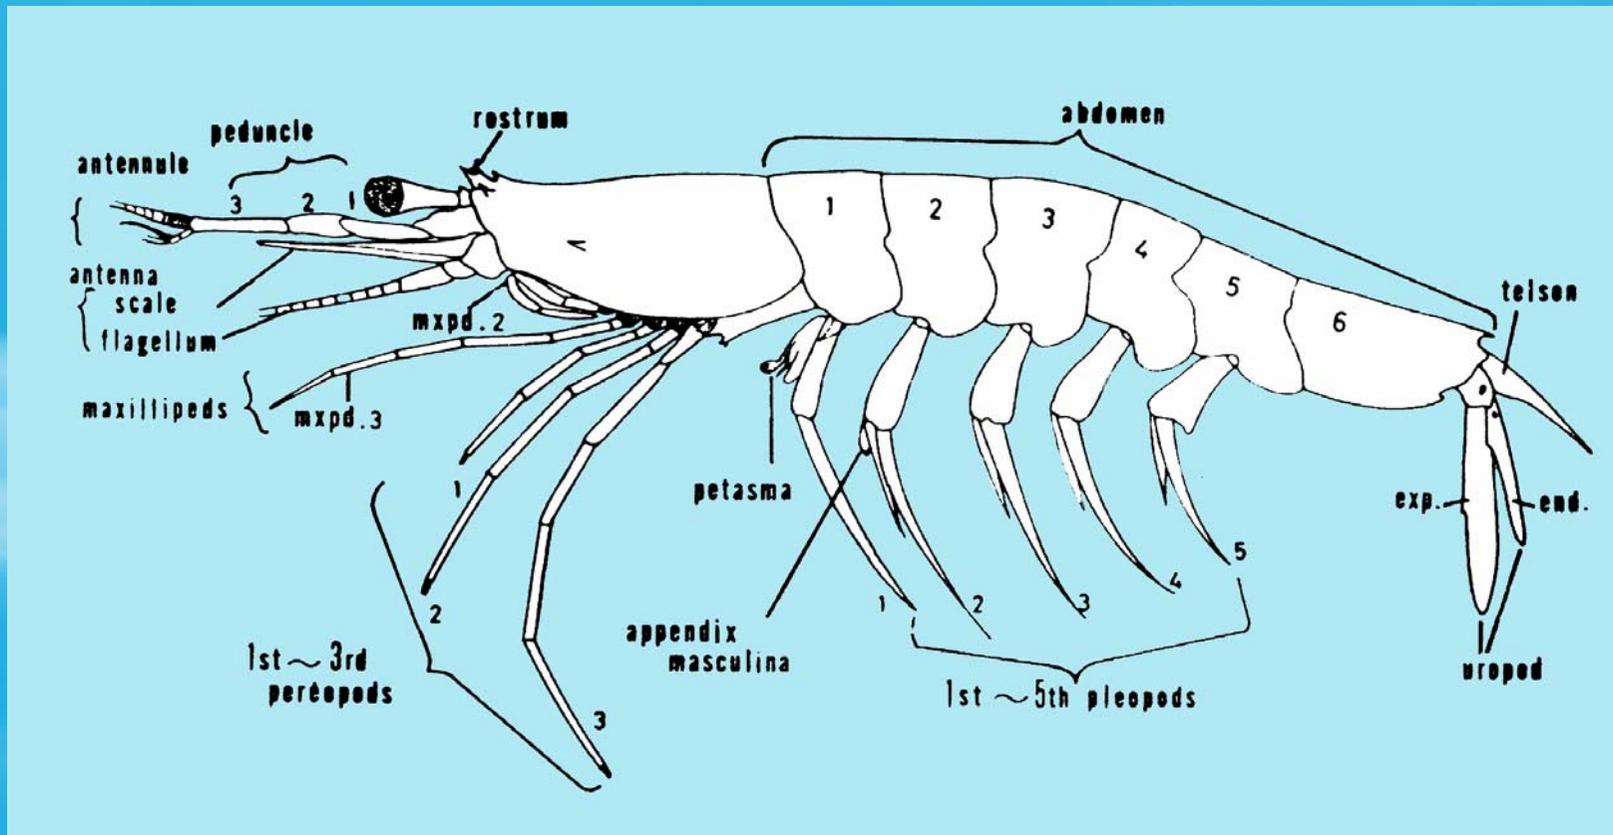

- **body laterally compressed, rostrum short;**
- **P<sub>1-3</sub> modified as maxillipeds;**
- **P<sub>4-5</sub> absent or rudimentary**
- **indirectly development**

# 1 General Morphology

## 1.1 Body form

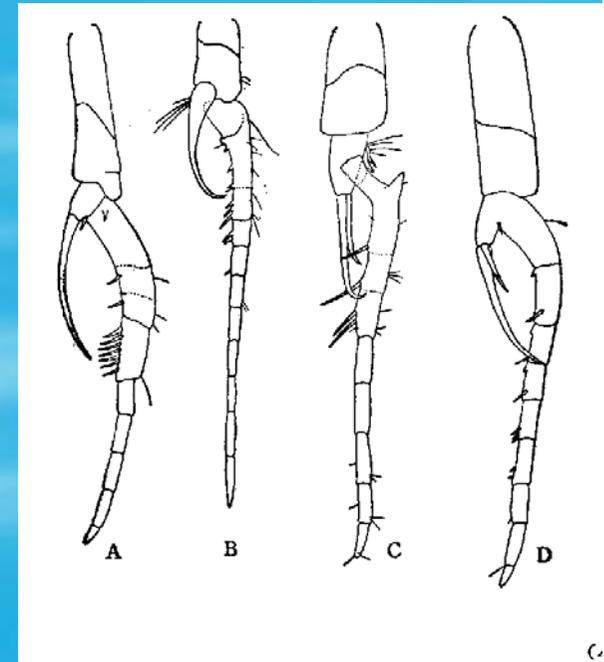

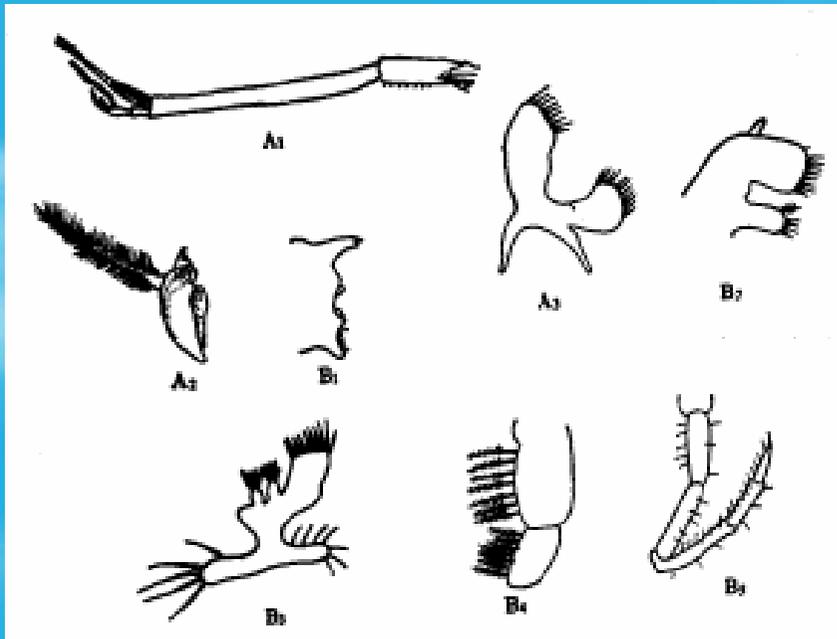

- cephalothorax
- abdomen, 6th abdominal somite with sexual dimorphism

## 1.2 Appendages

- (1)  $A_1$ , statocyst, ♂ clasping organ
- (2)  $A_2$
- (3)  $M$ ;  $M_1$ ;  $M_2$ ;  $M_p$
- (4)  $P_{1-8}$
- (5)  $Pl_{1-5}$ , sexual dimorphism
- (6)  $Up$

## 1.3 Eyes, compound eyes with eyestalk

*A. Indicus A. erythraeus*  
*A. serrulatus A. japonicus*

# 2 Classification

**M with or without palp**

- **2.1 Subfamily Sergestinae**

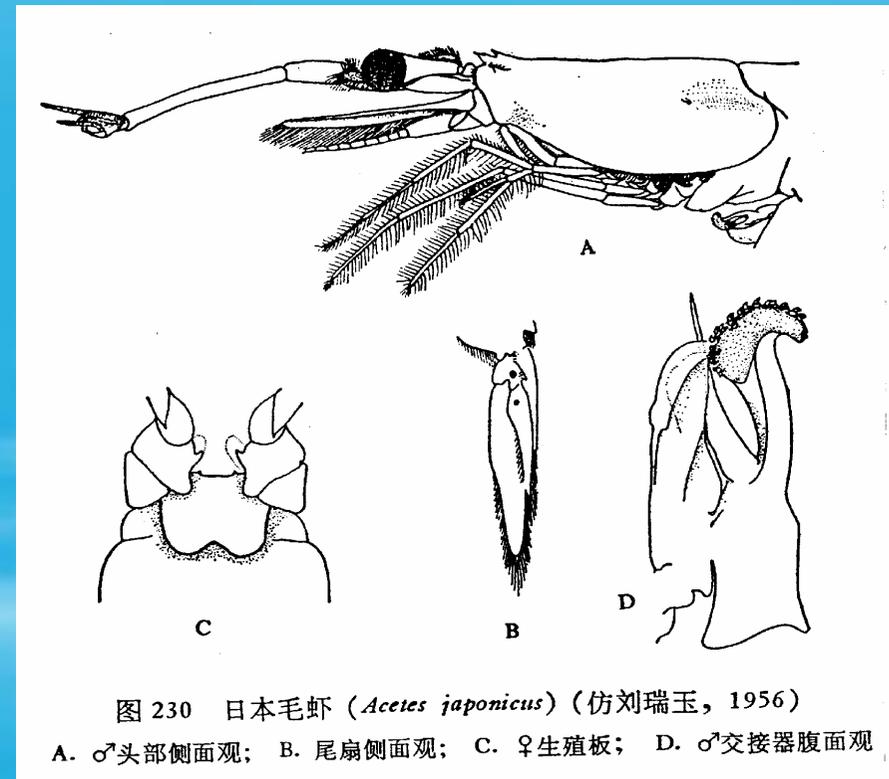

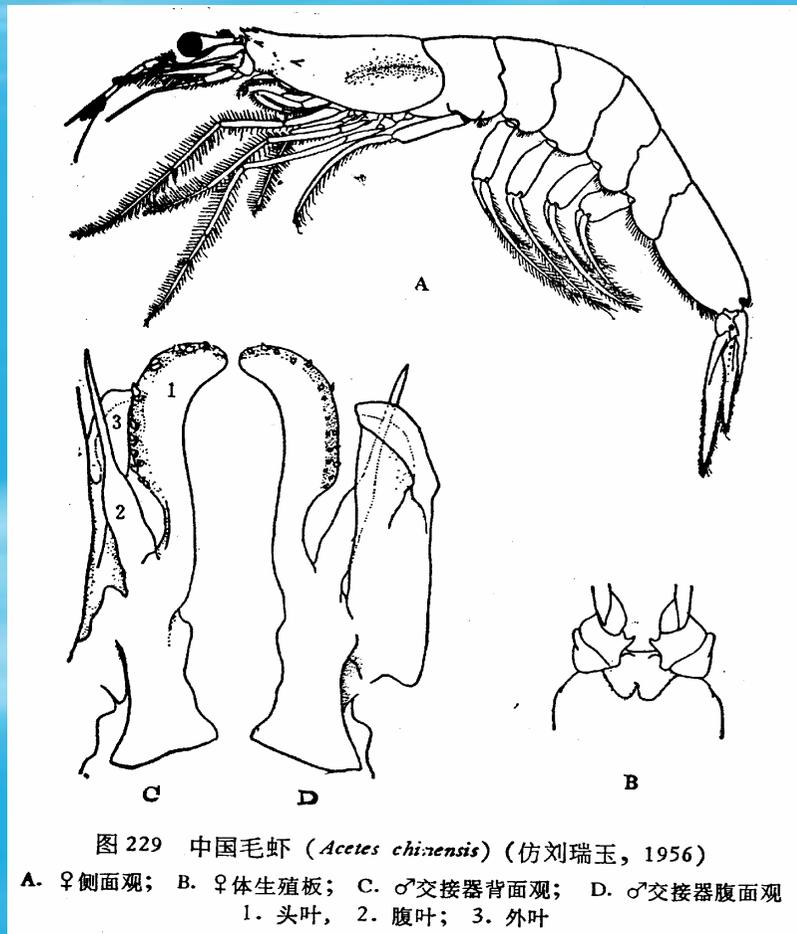

- (1) *Acetes*

- (2) *Sergestes*

- **2.2 Subfamily Luciferinae**

- (1) *Lucifer*

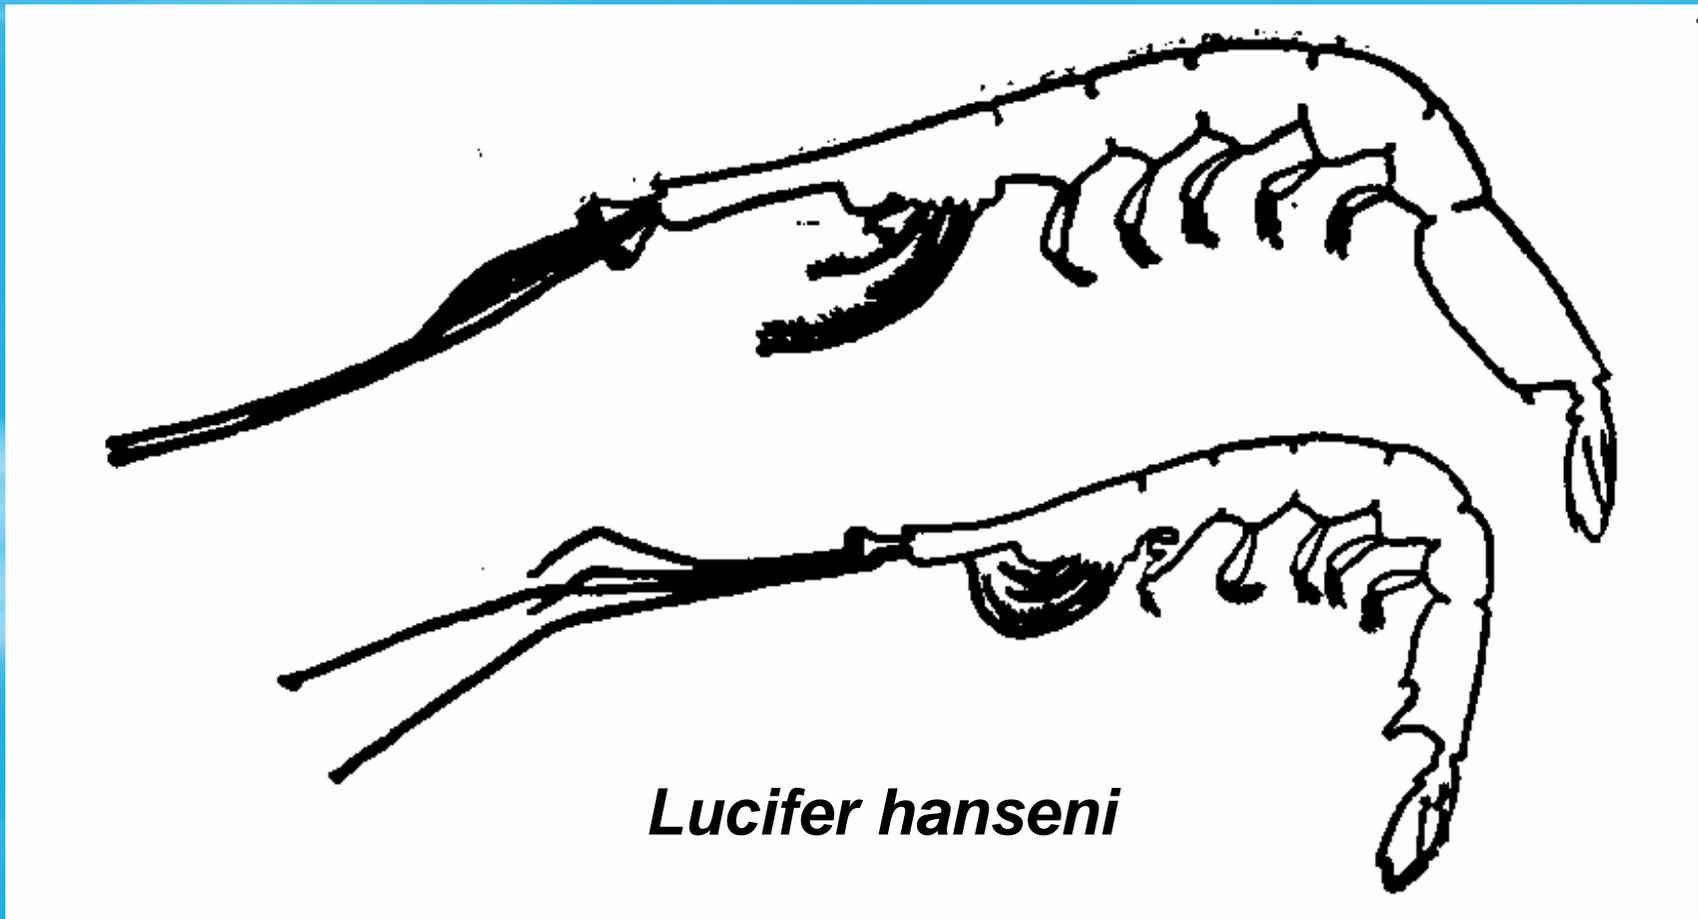

# Acetes

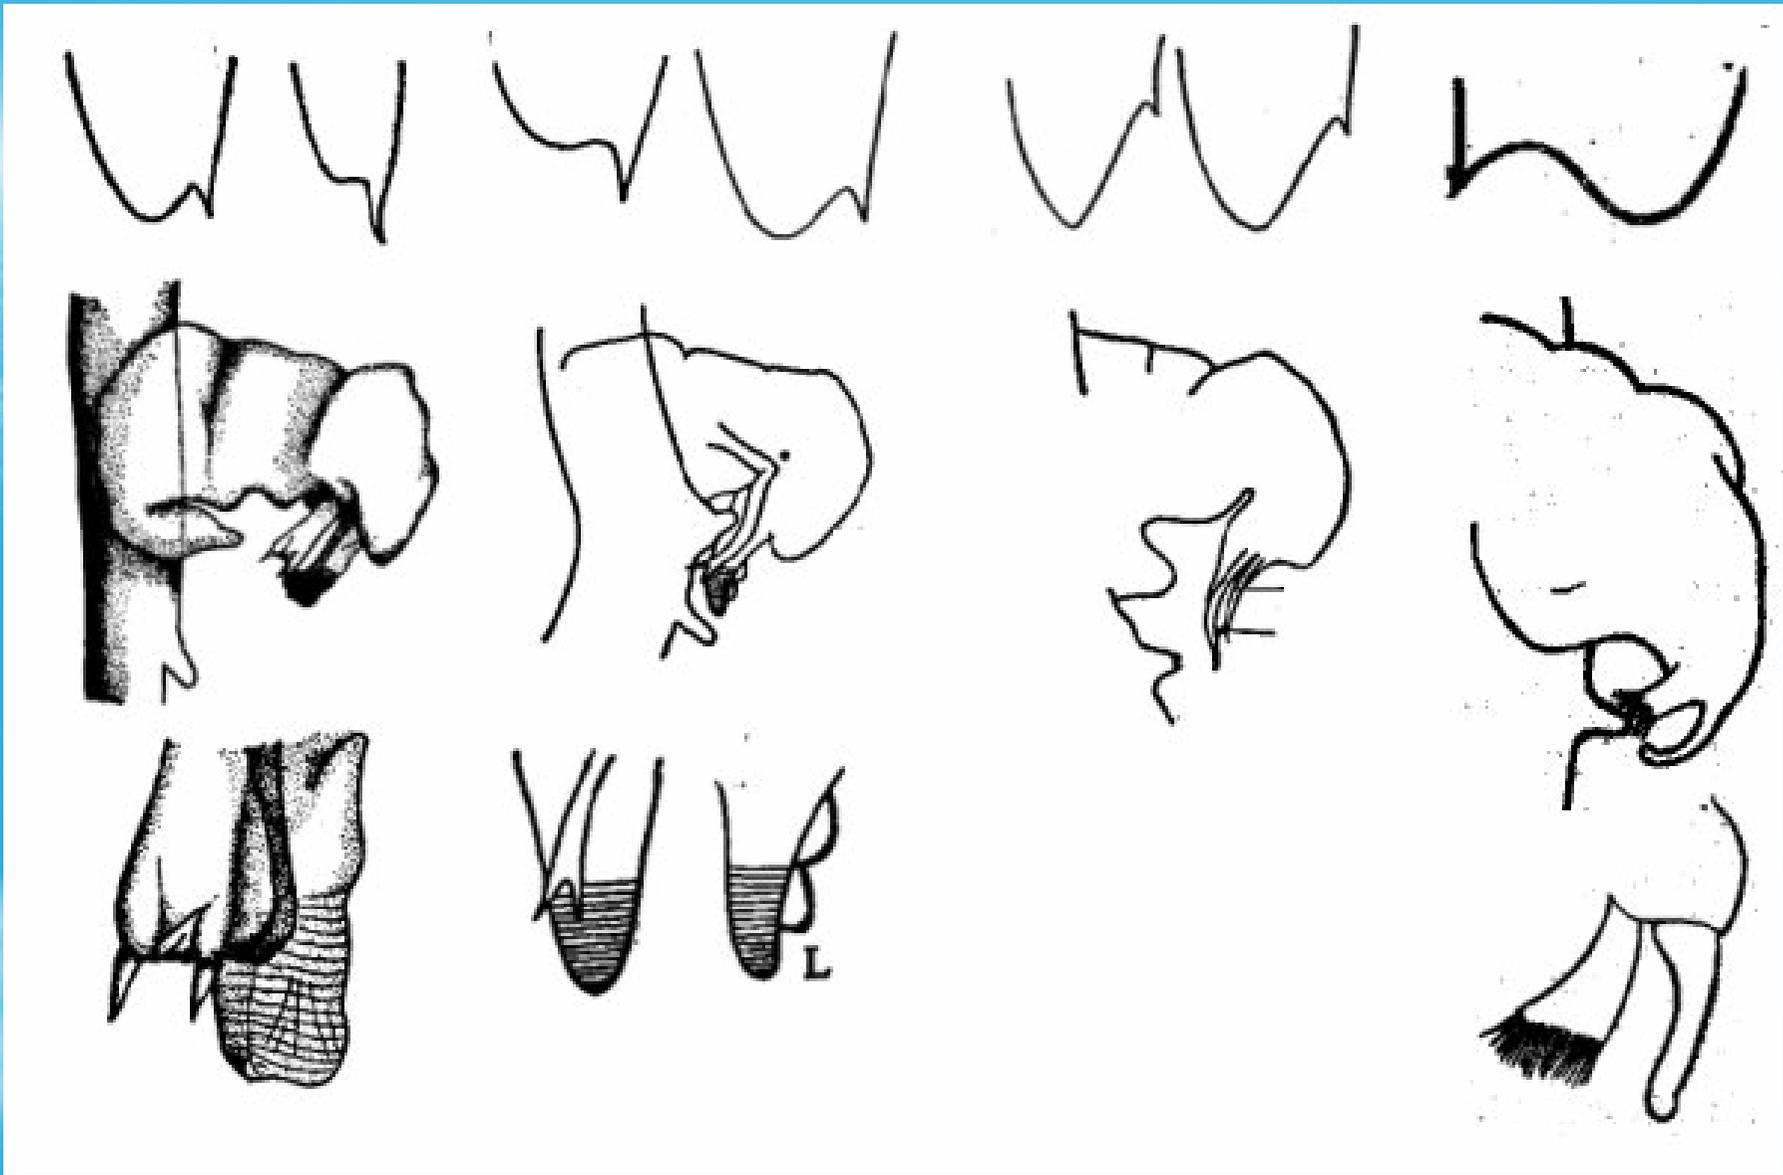

## Sexual differences of *Acetes*

| <b>Characters</b>                          | <b>male</b>   | <b>female</b>                              |
|--|---|--|
| <b>body length</b>                         | <b>shorter</b>  | <b>longer</b>                              |
| <b>genital plate</b>                       | <b>smaller</b>  | <b>larger</b>                              |
| <b>compound eyes</b>                       | <b>smaller with shorter ocular stalk</b>                            | <b>larger with longer ocular stalk</b>     |
| <b>inferior flagellum of A<sub>1</sub></b> | <b>modified as clasping organ</b>                                   | <b>unmodified</b>                          |
| <b>scale of A<sub>2</sub></b>              | <b>extending to base of 3rd peduncular segment of A<sub>1</sub></b> | <b>extending to middle of that segment</b> |
| <b>genital coxae</b>                       | <b>present, papilla-like</b>  | <b>absent</b>                              |
| <b>Pl<sub>1</sub></b>                      | <b>with petasma</b>   | <b>normal</b>                              |
| <b>base of Pl<sub>2</sub> Ri</b>           | <b>with appendix masculina</b>                                      | <b>absent</b>                              |

# *Lucifer*

*Lucifer hansenii*

*L. typus*

*L. intermedius*

*L. hanseni*

*L. penicillifer*

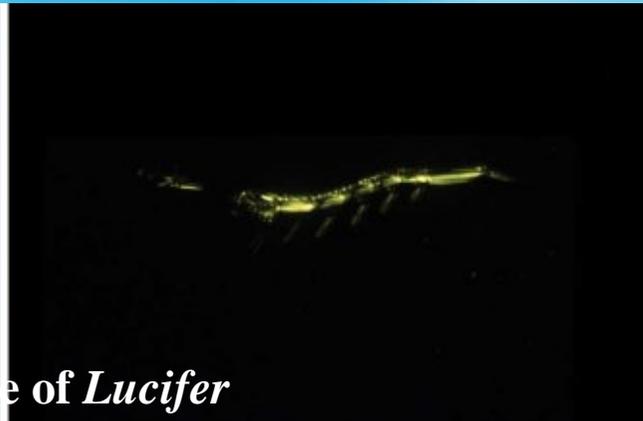

## Sexual differences of *Lucifer*

| <b>Characters</b>                           | <b>male</b>                       | <b>female</b>                                      |
|---|-----------------------------------|--|
| <b>body and head length</b>                 | <b>shorter</b>                    | <b>longer</b>                                      |
| <b>Inferior margin of Ab<sub>6</sub></b>    | <b>with 2 spinal processes</b>    | <b>with very small spine at posterior end only</b> |
| <b>telson</b>                               | <b>with large ventral process</b> | <b>without process</b>                             |
| <b>protopodite of P<sub>1</sub></b>         | <b>with petasma</b>               | <b>without petasma</b>                             |
| <b>appendix masculina of Pl<sub>1</sub></b> | <b>present</b>                    | <b>absent</b>                                      |

# 3 Biology and Significance

- 3.1 Distribution
- 3.2 *Acetes* fishery

According to FAO statistics(1995), *A. chinensis* supports the largest single shrimp fishery in the world (409,995t), and the vast majority of world landings are taken in China.

Bioluminescence of *Lucifer*
